

GENETIC BENCHMARKING REPORT

PAA

PAVEY

MID AUGUST 2026

INTRODUCTION

This publication provides information enabling you to carefully evaluate and benchmark the genetic improvement of your seedstock breeding enterprise against other Angus seedstock enterprises who are members of Angus Australia.

Several different reports are provided within this publication, including:

- **Current Genetic Position:** a summary of the average genetic merit of the current dams and calves within your seedstock enterprise, relative to Angus seedstock animals in other herds.
- **Genetic Progress Summary:** a summary of the genetic improvement that has occurred within your seedstock enterprise within the past five years, relative to the genetic progress that has occurred within other Angus seedstock enterprises.
- **Genetic Progress By Trait:** a summary of the genetic improvement that has occurred for each trait within your seedstock enterprise over time, relative to the genetic progress that has occurred within other Angus seedstock enterprises.
- **Use of Reproductive Technologies:** a summary of the utilisation of reproductive technologies within your seedstock enterprise over time, relative to the utilisation of reproductive technologies within other Angus seedstock enterprises.
- **Generation Length:** a summary of the average age of sires and dams within your seedstock enterprise over time, relative to the average age of sires and dams within other Angus seedstock enterprises.
- **Genetic Diversity:** a summary of the average level of inbreeding within your seedstock enterprise over time, relative to the level of inbreeding within other Angus seedstock enterprises.
- **Carrier Frequency by Register:** a summary of the frequency of carriers for recessive genetic conditions in within your seedstock enterprise over time.

This publication should be used to not only benchmark the genetics of animals within your seedstock enterprise, but to identify areas that can be targeted to increase the rate of genetic improvement being achieved within your breeding program.

Further information on the interpretation of this publication is provided within each report, or is available from staff at Angus Australia.

ACKNOWLEDGEMENTS

Angus Australia gratefully acknowledges the contributions of Agricultural Business Research Institute (ABRI) staff in the calculation of the EBVs that are used to generate many of the reports contained in this publication, along with staff at the Animal Genetics & Breeding Unit (AGBU) and Meat & Livestock Australia Limited (MLA) in the development of the beef genetic evaluation analytical software used to generate the EBVs, and members of Angus Australia who collect the pedigree, performance and genomic information that underpins the EBVs.

Angus Australia also acknowledges its partnership with the New Zealand Angus Association in conducting the Trans-Tasman Angus BREEDPLAN analysis, and the co-operation of the American Angus Association, the Canadian Angus Association and the Red Angus Association of America in providing EPD information is gratefully acknowledged.

This report was created as a result of a collaboration between Angus Australia and Meat & Livestock Australia Donor Company (MDC) (Project P.PSH.1063).

DISCLAIMER

The information used to generate the reports within this publication was compiled based on data supplied to Angus

Australia by members and/or third parties. Whilst every effort is made to ensure the accuracy of the data, Angus Australia, its officers and employees, assume no responsibility for the accuracy of the reports in this publication, nor for the outcome (including consequential loss) of any action taken based on the information presented in this publication.

This report benchmarks the EBVs of the calves within your seedstock enterprise, relative to calves in other Angus seedstock enterprises, in the nominated birth year.

Note: the percentile bands reflect how the EBVs of calves in your enterprise compare to other Angus seedstock animals born in the nominated birth year, which may differ from how they compare to the percentile bands included in the standard reference tables for the TransTasman Angus Cattle Evaluation.

Trait	Herd	Breed	Percentile Band

Genetic Progress Summary 2020 to 2025

Date: August 14, 2026
Page: 3

This report assesses the change in the average EBVs of animals born in your seedstock enterprise across the nominated five year period. Equivalent statistics are provided for animals born in other Angus seedstock enterprises, enabling not only the genetic change that has occurred within your seedstock enterprise to be assessed in isolation, but also enabling this genetic change to be benchmarked with the change that has occurred within the Angus breed as a whole during the nominated period.

Trait	Units	Herd		Breed	
		Change	Av. Change / Yr	Change	Av. Change / Yr

This report assesses the change in the average EBVs of animals born in your seedstock enterprise across the nominated five year period in standard deviation units (rather than the units of measurement), enabling comparison of the relative change that has occurred in individual traits. Equivalent statistics are provided for animals born in other Angus seedstock enterprises.

The reports below assess the change in the average EBVs of animals born in your seedstock enterprise in each year for each respective trait. Equivalent statistics are provided for animals born in other Angus seedstock enterprises, enabling not only the genetic change that has occurred within your seedstock enterprise to be assessed in isolation, but also enabling the genetic change in your enterprise to be benchmarked with the genetic change in the Angus breed as a whole.

This report assesses the utilisation of reproductive technologies within your seedstock enterprise by summarising the number of animals born in your herd in each year that have been bred by artificial insemination and embryo transfer. Equivalent statistics are provided for animals born in other Angus seedstock enterprises.

Generation Length
Average Sire and Dam Age By Year

This report summarises the average age of the sires and dams within your seedstock operation over time. The statistics are calculated as the age of the sire and dam when their progeny are born, and are weighted according to the number of progeny that a sire or dam has in a particular calving year. For example, if a sire has 50 calves in a particular calving year, its age will make a greater contribution to the average age statistics than a sire with 5 calves. Equivalent statistics are provided for animals born in other Angus seedstock enterprises.

Calving Year	Animals	Sire Age (Years)				Dam Age (Years)			
		All	Natural	AI	ET	All	Natural	AI	ET
2008	0	-	-	-	-	-	-	-	-

2025	20	3.1	3.1	-	-	4.3	4.3	-	-

This report assesses the genetic diversity within your seedstock enterprise by summarising the average inbreeding co-efficient of animals born in your herd in each year. Equivalent statistics are provided for animals born in other Angus seedstock enterprises, enabling not only the change in genetic diversity that has occurred within your seedstock enterprise to be assessed in isolation, but also enabling the benchmarking of genetic diversity in your seedstock enterprise with the genetic diversity in the Angus breed as a whole.

2025	20	5.9	3.8

This report assesses the frequency of carriers for recessive genetic conditions within your seedstock enterprise over time. The statistics are calculated based on the results of the gene probability analyses conducted by Angus Australia.

This report provides the average EBVs for all animals born in your herd over time.
